

SHIPPING CONTAINER LINERS

- Design and produce liners for 20', 40', and 53' containers.
- Install, load, and discharge easily.
- Made from high quality materials.
- One of the most cost effective means of bulk packing.
- Protect your products and the container from contamination.
- Highly flexible and suited for a range of products.

Applications

Container Liners are the ideal shipping solution for a wide array of different products and applications including, but not limited to:

- ▶ Fertilizers
- ▶ Polymers(PET/PTA)
- ▶ Chemicals
- ▶ Animal Feed
- ▶ Seeds
- ▶ Food Items

Materials Used:

Dry Bulk Container liners are made from Poly Ethylene (PE) film, Woven Poly Propylene (PP) fabric, Woven HDPE fabric, Anti-Static PE Film, PE/PET Film, and Foil/PE Laminate.

Loading Styles:

Various styles for easy loading of materials such as: Rear/Top Spout, Wide Access Zipper, Full Open Door, etc.

Why Container Liners?

Shipping container liners have many benefits and uses for transporting dry bulk and fluid materials. The main benefit being keeping a clean and protective shield between the product and the interior of the container. They also keep the container free from residue and protect the product in use from contamination. This form of bulk container liners also results in saved cost and time by reducing the amount of packaging needed to ship large amounts of food, chemicals, minerals, and waste. They are also a time saver, allowing for easy installation, loading, and discharging.

GSM:

Woven PP Liner ranging from 100 GSM to 220 GSM fabric and PE Liner from 100 micron to 350 micron.

Unloading Styles:

Easily unload your product/material with: Discharge Spout, Letterbox Hatch, Triangular Spout/Fishtail.
